# NetSuite non-inventory items load

## *Non-inventory Item for Sale import: MINIO_-_Noninventory_for_Sale.csv*

## Overview

| | |
|---|---|
| **Record type** | Items > Non-inventory Item for Sale |
| **Load file** | MINIO_-_Noninventory_for_Sale.csv |
| **Items** | 11 |
| **Source** | Workbook MINIO-Dimensions-from-sage-20260825, tabs COA Draft v1, Departments Draft v1 and Items |
| **Filled** | External ID, Item Name, Display Name/Code, Class, Subsidiary, Include Children, Sales Description, Income account, Deferred Revenue account |
| **Open** | 6 columns. Department stays blank for now. Most are set per item group, under Values by group |
| **Status** | Waiting on accounting for accounts and revenue recognition |

## Load file

`MINIO_-_Noninventory_for_Sale.csv` as it stands: 11 rows, 16 columns. Blank cells are still open. Scroll sideways to see every column.

External ID and Item Name both use the item ID. Item Name/Number is the code and the import key. Display Name/Code is the readable name; NetSuite prints it on forms instead of the code when it is set. Sales Description is the longer line text on quotes and invoices.

| External ID | Item Name | Display Name/Code | Department | Class | Subsidiary | Include Children | Sales Description | Base Price | Income account | Deferred Revenue account | Revenue Recogition Rule | Rev Rec Forecast Rule | Create Revenue Plans On | Direct Revenue Posting | Can be fulfilled/received |

## Values by group

Every item in a group gets the same values.

| Column | Support | Training | License |
|---|---|---|---|
| **Department** | None for now | None for now | None for now |
| **Class** | Support | Training | License |
| **Income account** | 41200 Support Revenue | 42200 Training Revenue | 41100 License Revenue |
| **Deferred Revenue account** | 23100 Deferred Revenue - ST | 23100 Deferred Revenue - ST | 23100 Deferred Revenue - ST |
| **Revenue Recogition Rule** | [TBC] | [TBC] | [TBC] |
| **Rev Rec Forecast Rule** | [TBC] | [TBC] | [TBC] |

Department, Class, accounts and rules must match existing NetSuite records, spelled as NetSuite shows them.

## Values for all items

| | |
|---|---|
| **Subsidiary** | MinIO, Inc., the parent of MinIO Pvt. Ltd. and MinIO Singapore Pte. Ltd. |

| | |
|---|---|
| **Include Children** | Yes, so all three subsidiaries can sell the items |
| **Sales Description** | Set per item, in the load file. No terms, dates or prices |
| **Base Price** | [TBC: list price per item, or blank and priced on each order] |
| **Create Revenue Plans On** | [TBC] |
| **Direct Revenue Posting** | [TBC: usually No when revenue recognition runs in NetSuite] |
| **Can be fulfilled/received** | [TBC: usually No for services and licenses] |

## Open questions

1. **Account format.** The CSV uses number and name, such as `41100 License Revenue`. Confirm on a test import that NetSuite matches it; child accounts may need the full path.
2. **OEM license.** Does AIStor OEM License use the same accounts and rule as the direct licenses?
3. **Platform training subscription.** Is it recognized like the live trainings or like a subscription?
4. **Base Price.** Do these items have list prices? How AIStor and MemKV licenses are measured (for example per TiB) is not known or may not be standard; the license descriptions leave the unit out for now.
5. **Classes in production.** License, Support, Training and Professional Services must exist in production before this load.
6. **Not in this load.** The Items tab lists Surcharge Fee for Marketplace and Reseller Margin (presented as a discount) as TBD. No Professional Services SKUs yet; 42100 Professional Services Revenue is ready when there are.
7. **Template header.** The template spells `Revenue Recogition Rule`. Kept as is; it only needs to match when mapping the import.
8. **Long-term deferred revenue.** Items post to 23100 Deferred Revenue - ST. The part earned more than 12 months out is reclassed to 23200 Deferred Revenue - LT by a period-end journal entry. Confirm the Unbilled, Billed and Paid accounts under 23200 are still needed.
9. **Show Display Name with Item Codes.** Setup > Company > General Preferences. Shows code and name together in item fields. If turned on, later CSV imports that reference items need the display name too, or fail with Invalid Parent Reference Key. Decide before the sales order and invoice loads.
10. **License delivery trigger.** License keys are issued manually; the issue date (available in BigQuery operating data) should drive invoicing and the revenue start. Options: (a) Can be fulfilled/received = Yes on license items and a fulfillment posted when the key is issued, with revenue plans created on fulfillment; (b) a custom revenue recognition event, created by script or integration; (c) no fulfillment, with the revenue start date set on the order line from the key issue date. Decide before the load: whether Can be fulfilled/received can change after items are used on transactions is unclear.
