NetSuite non-inventory items load

Non-inventory Item for Sale import: MINIO_-_Noninventory_for_Sale.csv

Overview

Record type	Items > Non-inventory Item for Sale
Load file	MINIO_-_Noninventory_for_Sale.csv
Items	11
Source	Workbook MINIO-Dimensions-from-sage-20260825, tabs COA Draft v1, Departments Draft v1 and Items
Filled	External ID, Item Name, Display Name/Code, Class, Subsidiary, Include Children, Sales Description, Income account, Deferred Revenue account
Blank on purpose	Department, Base Price, Revenue Recogition Rule, Rev Rec Forecast Rule. No revenue recognition rules are set up yet
Open	Create Revenue Plans On, Direct Revenue Posting, Can be fulfilled/received
Status	Waiting on the license delivery trigger and the portal question

Load file

`MINIO_-_Noninventory_for_Sale.csv` as it stands: 11 rows, 16 columns. Blank cells are still open. Scroll sideways to see every column.

External ID and Item Name both use the item ID. Item Name/Number is the code and the import key. Display Name/Code is the readable name; NetSuite prints it on forms instead of the code when it is set. Sales Description is the longer line text on quotes and invoices.

Values by group

Every item in a group gets the same values.

Column	Support	Training	License
Department	None for now	None for now	None for now
Class	Support	Training	License
Income account	41200 Support Revenue	42200 Training Revenue	41100 License Revenue
Deferred Revenue account	23100 Deferred Revenue - ST	23100 Deferred Revenue - ST	23100 Deferred Revenue - ST
Revenue Recogition Rule	Blank: no rules set up yet	Blank	Blank
Rev Rec Forecast Rule	Blank: no rules set up yet	Blank	Blank

Department, Class, accounts and rules must match existing NetSuite records, spelled as NetSuite shows them.

Values for all items

Subsidiary	MinIO, Inc., the parent of MinIO Pvt. Ltd. and MinIO Singapore Pte. Ltd.
Include Children	Yes, so all three subsidiaries can sell the items
Sales Description	Set per item, in the load file. No terms, dates or prices
Base Price	Blank: not known
Create Revenue Plans On	[TBC: depends on the license delivery trigger]
Direct Revenue Posting	[TBC: No proposed for all 11 items]
Can be fulfilled/received	[TBC: No proposed for support and training; license items depend on the delivery trigger]

Open questions

1. **Account format.** The CSV uses number and name, such as `41100 License Revenue`. Confirm on a test import that NetSuite matches it; child accounts may need the full path.
2. **OEM license.** Does AIStor OEM License use the same accounts and rule as the direct licenses?
3. **Platform training subscription.** Is it recognized like the live trainings or like a subscription?
4. **Classes in production.** License, Support, Training and Professional Services must exist in production before this load.
5. **Not in this load.** The Items tab lists Surcharge Fee for Marketplace and Reseller Margin (presented as a discount) as TBD. No Professional Services SKUs yet; 42100 Professional Services Revenue is ready when there are.
6. **Template header.** The template spells `Revenue Recogition Rule`. Kept as is; it only needs to match when mapping the import.
7. **Long-term deferred revenue.** Items post to 23100 Deferred Revenue - ST. The part earned more than 12 months out is reclassed to 23200 Deferred Revenue - LT by a period-end journal entry. Confirm the Unbilled, Billed and Paid accounts under 23200 are still needed.
8. **Show Display Name with Item Codes.** Setup > Company > General Preferences. Shows code and name together in item fields. If turned on, later CSV imports that reference items need the display name too, or fail with Invalid Parent Reference Key. Decide before the sales order and invoice loads.
9. **License delivery trigger.** License keys are issued manually; the issue date (available in BigQuery operating data) should drive invoicing and the revenue start. Options: (a) Can be fulfilled/received = Yes on license items and a fulfillment posted when the key is issued, with revenue plans created on fulfillment; (b) a custom revenue recognition event, created by script or integration; (c) no fulfillment, with the revenue start date set on the order line from the key issue date. Decide before the load: whether Can be fulfilled/received can change after items are used on transactions is unclear.
10. **Portal sales.** Smaller businesses and individuals buy AIStor through a portal, about monthly, and revenue is recognized immediately. These items defer revenue, so portal sales need either a separate portal item with Direct Revenue Posting = Yes and no deferred revenue account, or no item at all if portal sales reach NetSuite as a summary journal entry from the payment processor.

11. **Revenue recognition rules.** None are set up yet, so both rule columns stay blank. NetSuite may require a rule on items that have a deferred revenue account; the sandbox import will show whether the load fails without one. Either way the items need rules before they are used on transactions, added later with an update import keyed on External ID.
